Combustion and Flame

THE JOURNAL OF THE COMBUSTION INSTITUTE

The journal exists for the publication of experimental and theoretical investigations of combustion phenomena and closely allied matters. Among the subjects emphasized are: atmospheric pollution from combustion; combustion in practical systems; deflagration and detonation waves; electrical aspects of flames; experimental techniques; fire phenomena; flame ignition; inhibition, propagation, stability and structure; fluid dynamics and combustion; heat transfer and radiation; heterogenous combustion; kinetics and mechanisms of combustion reactions; limits of flammability and of spontaneous ignition; modeling and scaling in combustion processes; new applications of combustion; propellants; sooting; spectra; supersonic reacting flow; thermal decomposition processes; thermochemistry and thermodynamics; transient species; transport properties and turbulence in flames. The Editors also encourage the submission of critical reviews of recent research. Announcements and reports of Combustion Institute and other pertinent meetings will be published whenever possible, as will reviews of relevant books.

EDITORS

J. N. Bradley
Department of Chemistry
University of Essex
Colchester CO4 35Q, England

H. B. Palmer
Fuel Science Section
Department of Materials Science and Engineering
319 Steidle Building
University Park, Pennsylvania 16802

DEPUTY EDITORS

R. F. Simmons
Department of Chemistry
The University of Manchester
Institute of Science and Technology
P.O. Box 88, Sackville Street
Manchester M60 1 QD, England

R. A. Strehlow
Department of Aeronautical and Astronautical Engineering
101 Transportation Building
Urbana, Illinois 61801

F. A. Williams
Department of Applied Mechanics and Engineering Sciences
University of California, San Diego
P.O. Box 109

Aims and Scope

The new journal LARGE SCALE SYSTEMS - *Theory and Applications* is devoted to the emphasis of unifying themes, to the cross fertilisation of ideas (particularly between theory and practice) and to stimulating interaction between workers in various particular research areas in which COMPLEXITY and HIGH DIMENSIONALITY play a dominant role.

LARGE SCALE SYSTEMS incorporates all aspects of Large Scale Systems Theory and Practice. Featuring original research, tutorial and review articles as well as short correspondence items, the Journal acts as a vehicle for the rapid dissemination of knowledge and experience to workers active in the field.

The Journal has a relatively pragmatic editorial policy where contributions of high quality are accepted on any aspect of the theory and practice of Large Scale and Complex Systems. This would cover at the present time, theoretical contributions on: Aggregation, Stability of Interconnected Systems, Robust Decentralised Control, Information in Large Systems, Hierarchical Optimisation and Control for Deterministic and Stochastic Static or Dynamical Systems, Multicriterion Optimisation, to name only a few areas of current interest.
On the applications side, contributions are accepted in any area where complexity exists and standard approaches fail. Papers are solicited, for example, in areas of Traffic and Transportation Systems, Power Systems, Socio-economic Systems, Data Networks, Management Systems, Environmental Systems, Chemical and Metallurgical Processes.

Papers Accepted for Publication in Volume 1:

Decentralized Tuning Regulators: An Application to Solve the Load and Frequency Control for a Large Power System *(Davison, Tripathi).* Overlapping Decompositions, Expansions, and Contractions of Dynamic Systems *(Ikeda, Siljak).* Optimum Coordination of Linear Interconnected Systems *(Basar).* Decentralised Structures for State Estimation in Large Scale Systems *(Tacker, Sanders).* Structural Sensitivity Analysis and its Applications *(Haruna, Komoda).* Decentralised Stabilisation of Systems with Slow and Fast Modes *(Khalil, Kokotovic).* A Class of Center-Free Resource Allocation Algorithms *(Ho, Servi, Suri).* Modelling Large Scale Socio-Economic Systems: Can We Begin to Do Better? *(Henize).* On Hierarchical Control of Complex Technological Systems *(Wend).*

Subscription Information:

1980: Volume 1 in 4 issues Subscription Price for 1980:
US $80.00/Dfl. 156.00 including postage.

Journals are automatically sent by air to the U.S.A. and Canada at no extra cost and to Japan, Australia and New Zealand with a small additional postal charge.

Free specimen copies are available upon request from the Publisher.
